WHAT IS DOCKER COMPOSE?

Why Docker Compose?

- Real world applications requires multiple services running in different containers.

- For this, we have to can:

  ○ Run multiple containers using the command line.

  ○ Use docker compose to run multi container applications.

- Docker compose makes the process simpler and cleaner.

What is Docker Compose?

- A tool for defining and running multi-container Docker applications.

- It includes creating a configuration file in YAML format.

- Reproducible and shareable configurations.

- Better local development environment

- One command is used to run all containers.

- Boosts productivity in development.
